6. Formative Assessment 2

Printing with the Newline Character

Fill in the blanks with the missing commands that will print the text `Hi!` **with** a newline character. **DO NOT** include any leading or trailing **spaces** when printing `Hi!`.

```
cout << "Hi!" << endl;
```

The `"Hi!"` will print the text `Hi!` and the `endl;` will add a newline character. **Don't forget to include the** `;` **after** `endl`.
